

# MG-BCH BRUSHCUTTER HEAD

\* Attachments depicted may include optional paint, upgrades, or custom configurations.

Our latest addition to our suite of road-side maintenance tools for graders is the Craig Brushcutter Head. Capable of easily cutting down 72" wide strips of brush and trees 6" in diameter and thicker, it's the perfect tool for paving the way for Craig's Mulcher Head **or** scenarios where cutting is needed, but mulching isn't necessary.

An ideal addition to your Craig 300 series (postless) wing, it is used with our boom/arm assembly that mounts to the Craig snow wing bracket (front bracket near the cab). The brushcutter head will remain in its desired position due to the parallel lift boom/arm configuration and with its swing ability you can maneuver to exactly where you need it to be. It can reach approximately 22'-9" from the outside of the grader tires to the outside of the cutting teeth.

- 72 in. cutting width
- Easy to replace cutting teeth
- Variable displacement hydraulic motor to optimize cutting speed and power
- Adjustable cutting height using reversible wear shoes
- Hydraulic hoses routed out the back near the hookup for minimal exposure
- Craig Front and Rear post bracket may be required to attach to grader (not shown in images). *Contact Craig for details and to determine if required.*
