

MG-MHB MULCHER HEAD & BOOM ARM

* Attachments depicted may include optional paint, upgrades, or custom configurations.

The Craig Mulcher covers a width of 72" and will handle brush and trees up to 6 inches in diameter. The rotor rings limit the cutting depth to improve efficiency of cut but to also reduce the risk of tooth holder breakage. The housing and frame are fully enclosed to protect the motor and bearing while the rubber guard reduces the level of flying debris.

The mulcher is an ideal addition to your Craig 300 series (postless) wing, it comes complete with a boom/arm assembly that mounts to the Craig snow wing bracket (front bracket near the cab). The mulching head will remain in its desired position due to the parallel lift boom/arm configuration and with its swing ability you can maneuver the mulching head where you need it to be.

- 72 in. cutting width
- Easy to replace rotatable cutting teeth
- Variable displacement hydraulic motor to optimize cutting speed and power
- Adjustable cutting height using reversible wear shoes
- Hydraulic hoses routed out the back near the hookup for minimal exposure
- Front post bracket may be required to attach to grader (not shown in images).

Contact Craig for details and to determine if required.
