

MG-PSI ROAD FORGE

Attachments depicted may include optional paint, upgrades, or custom configurations.

Designed for compacting freshly graded roads, this attachment eliminates the need for a second machine to follow behind the grader while it is performing grading operations. It features 12 smooth tires (4 per walking beam) for even compaction. Each walking beam applies pressure to follow the contours of the road and has its own lift cylinder. The Packer also has side shift ability to allow for compaction outside of the graders tire path

- Accumulator maintains constant pressure on the cylinders over uneven roads
- Available in 8' or 10' width
